

NELSON & KEARNEY STREETS STAGE 7 & 8 SOIL TEST SUMMARY

Please find below a summary of the soil test results for Nelson & Kearney Streets Stages 7 & 8. Once you have secured a lot we will email you a full soil test report. We recommend that this report be shown to your builder so that extra costs for foundations and retaining walls can be considered when purchasing the land.

Please note that if you plan to level the lot and retain the soil on the boundaries of the block, you will need to look at the soil test result in the column labelled "After Cut/Fill". The four Toowoomba soil testers have nominated a cut/fill level for each lot but please note these levels are only estimates and have not been determined by taking levels on the lots. If you have a builder in mind, we suggest that you check with your builder on how to best prepare the site for building and in doing so you will gain a more accurate cut/fill level and retaining wall height. Your builder may also take levels on the lot and then refer to the bore logs in the soil test report to confirm the soil type at the specific cut/fill measurement required for your lot.

Site Preparation: When cutting and filling your lot to prepare the site for building, please talk to the neighbouring lot owners before site preparation. Often a better and less expensive outcome is achieved by working together. Retaining your site without considering the adjoining lots will result in a reduced building area for your neighbours (as they may need to be 1.5m off your retaining wall before they are able to construct a wall to retain their lot).
